Call for Papers

11th International Workshop on Heterogeneous High-performance Reconfigurable Computing (H²RC)

November 21, 2025 (Half Day Friday)

Held in conjunction with SC25: The International Conference for High Performance Computing, Networking, Storage and Analysis

http://h2rc.cse.sc.edu

Accepted papers will be included in the SC Workshop Proceedings

Submission Deadline

August 6, 2025 (8-page full papers or 2-page extended abstract, see below)

As conventional von-Neumann architectures are suffering from rising power densities, we are facing an era with **power**, **energy efficiency**, and **cooling** as first-class constraints for scalable HPC. FPGAs can tailor the hardware to the application, avoiding overheads and achieving higher hardware efficiency than general-purpose architectures. Leading FPGA manufacturers have recently made a concerted effort to provide a range of higher-level, easier-to-use high-level programming models for FPGAs.

Such initiatives are already stimulating new interest within the HPC community around the potential advantages of FPGAs over other architectures. With this in mind, this workshop, now in its tenth year, brings together HPC and heterogeneous computing researchers to demonstrate and share experiences on how newly-available high-level programming models are already empowering HPC software developers to directly leverage FPGAs and to identify future opportunities and needs for research in this area.

Submission Tracks and Contribution Selection

Submissions are solicited for two tracks:

- **Track 1:** Full-length papers (8 pages, excluding references) for oral presentation and publication in SC Workshop Proceedings.
- **Track 2:** Extended abstracts / talk proposals (2 pages, excluding references) oral presentation without publication.

Track 1 is targeted for technical papers containing a high level of implementation detail and analysis of experimental results. Track 1 is suited for members of the academic and national lab community who prefer to have their work peer-reviewed and included in SC Workshop Proceedings.

Track 2 is targeted for industrial contributions that describe new capabilities and opportunities offered by emerging technologies and products, or work in progress presentations by the academic and national lab community. The emphasis of this track is to initiate a discussion with the audience. These extended abstracts will be made available on the conference website.

All submissions are peer reviewed and evaluated by at least three members of our technical program committee (TPC). From the TPC evaluation of each submission, the organizing committee will select papers for presentation based on a criteria that is **equally weighted** between scientific merit and level of interest and relevance to the HPC community.

Submission Topics

Submissions are solicited that explore the state of the art in the use of FPGAs in heterogeneous high-performance compute architectures and, at a system level, in data centers and supercomputers. FPGAs may be considered from either or both the distributed, parallel and composable fabric of compute elements or from their dynamic reconfigurability. Submissions investigating the use of FPGAs in combination with other devices such as CPU/GPU/APU/DPU/NPU are particularly welcomed.

Submissions may report on theoretical or applied research, implementation case studies, benchmarks, standards, or any other area that promises to make a significant contribution to our understanding of heterogeneous high-performance reconfigurable computing and help to shape future research and implementations in this domain. A non-comprehensive list of potential topics of interest is given below:

- 1. Use of FPGAs to improve performance or efficiency of HPC or data center applications
- 2. System integration of FPGAs in clouds and distributed HPC systems
- 3. Leveraging reconfigurability
- 4. Benchmarks
- 6. Programming languages, tools, and frameworks
- 7. Future-gazing

Submission Guidelines

Full papers (Track 1)

Authors should submit original contributions of up to 8 pages (excluding references) in PDF format using the Supercomputing Linklings portal (<u>https://submissions.supercomputing.org</u>), which is also linked from the H2RC website (<u>https://h2rc.cse.sc.edu</u>). Submissions must be formatted using the IEEE proceedings template

(<u>https://www.ieee.org/conferences/publishing/templates.html</u>). H2RC uses a single blind review process. We support the <u>SC reproducibility initiative</u> and highly encourage authors to add an artifact description/artifact evaluation appendix of up to 2 additional pages to their paper. All accepted papers will be published in the SC Workshop Proceedings.

Talk proposals (Track 2)

To apply for a talk authors should submit a 2-page extended abstract. The extended abstract will be peer-reviewed and used for deciding on the acceptance of a presentation assignment of a presentation slot, but will be published only on the workshop website but not in the proceedings. The papers shall follow the same formatting instructions as the full papers and have also to be submitted using the Linklings system.

Important dates:

Submission Deadline: Acceptance Notification: Camera-ready Manuscripts Due: Workshop Date: August 6, 2025 September 5, 2025 September 26, 2025 November 21, 2025

Workshop Format

H²RC is a half-day Friday workshop. It will consist of invited talks and talks selected among paper submissions.

Workshop Organizers:

Jason D. Bakos, University of South Carolina Franck Capello, Argonne National Lab Torsten Hoefler, ETH Zurich Ken O'Brien, AMD Christian Plessl, Paderborn University Melissa Crawley Smith, Clemson University

Technical Program Committee:

TBA
